

December 2020

To whom it may concern

Dear Sir/Madam

Re – B Pure air purification unit of Biopharmax Group

At the Shamir Medical Center, one of the leading medical centers in Israel, with 900 beds, we had tested the B_Pure air purification unit of Biopharmax Group for an approximate period of 3 months.

We had placed the unit in the gowning room at the exit of the Corona Department, where staff take off their gown and a high level of aerosols raises fear of causing contraction of the virus by the staff.

After this period I can comfortably confirm that we had not seen an outstanding number of cases of contracting the virus by hospital staff.

Following these observations we had ordered more units which we will be placing in:

1. The ICU department
2. In a new wing in the emergency department we set up for patients who are suspected of contracting the virus - Our goal is to put an extra level of protection for those patients, by minimizing the air contamination and therefore, to prevent them from contracting the virus in the department itself.

I positively recommend the system for the purpose of reducing health contamination risk to humans.

Eli Cohen
Chief Engineer
Shamir Medical Center
